

Benarx Flexiroll XP is a passive fire protection product developed for various applications. The thin flexible product is developed to be timesaving during installation and to be used in confined areas. It is designed to be cut easily to size and is delivered in stacked rolls with standard size of 0,6 x 3 m. It is fastened with high quality stainless steel bands and can be installed in any weather conditions.

The product is a reinforced fibre mat covered in intumescent epoxy material. Benarx Flexiroll XP withstands the toughest jet fire scenarios.

Tested for jet-fire and high heat flux jet-fire for up to 60 minutes

Provides the thinnest available system for half-fabricated fire-protection

Ability to order in bulk minimizes logistics work during procurement and job-setting

Prefabricated design eliminates epoxy application on site and reduces HSE risk

Passive Fire Protection
